

# BT302

## BUS TERMINATOR

The function of the bus terminator is to prevent signal reflection and noise in the fieldbus network. Due to its small size and particular shape the BT302 can easily be mounted directly in any junction box only using two screws. The BT302 has industrial grade packing, the internals of it are hermetically sealed, eliminating impact from humidity and other environmental factors. BT302 has IS (Intrinsic Safety) certification.
