

POWER SUPPLY SWITCH BOX

The **Power Supply Switch Box** QDA-5 and QDA-10 are electrical devices that provide a safer distribution of power supply for panel and field instruments. Its compact design and functionality saves panel space, providing a better layout, and reduces the installation time.

The QDA receives power, ac or dc, and distribute it through separated channels. Each channel has a DPST switch and fuse holder, allowing shut-off of one loop while others continue running.
